

# FLOWER POWER: STORYBOARD

Use the boxes below to create your storyboard. Draw a picture to illustrate each paragraph in the box above it.

1. Plants have flowers to attract pollinators. They are advertising pollen and nectar in the hope that visiting pollinators will move their pollen between flowers.

2. Pollen is produced by the anther and needs to end up on the stigma of another flower. When this happens, we say that pollination has taken place.

3. Bees and butterflies are pollinators but beetles, ants, birds and even mammals can be pollinators too! Some plants like grasses don't need pollinators at all, instead they use the wind to move their pollen.

4. Flowers have all sorts of clever ways to attract bee pollinators. Brightly coloured petals, nectar guides and even ultraviolet markings that humans can't see!

5. If pollen is moved between flowers and fertilisation occurs, the flower can start to produce seeds which will eventually grow into new plants.

6. Its important for us to learn about flowers and pollinators. We rely on pollinators for a lot of the food we eat and they're important for wild plants and supporting other wildlife.

# FLOWER POWER: STORYBOARD TEXT

**Read out each paragraph twice. Give some time to draw before moving on to the next paragraph one but not too much!  
It doesn't matter if not all the detail is captured, the idea is to create a snapshot. Pictures only, no words allowed!**

# FLOWER POWER: STORYBOARD

Use the boxes below to create your storyboard. Draw a picture to illustrate each paragraph that's read out.

A large empty rectangular box for drawing a picture to illustrate the first paragraph.

1.

A large empty rectangular box for drawing a picture to illustrate the second paragraph.

2.

A large empty rectangular box for drawing a picture to illustrate the third paragraph.

3.

A large empty rectangular box for drawing a picture to illustrate the fourth paragraph.

4.

A large empty rectangular box for drawing a picture to illustrate the fifth paragraph.

5.

A large empty rectangular box for drawing a picture to illustrate the sixth paragraph.

6.
